

IMB & IMBL High Definition Boundary Microphones™

For Boardrooms, Teleconferencing & Government Facilities

Architectural & Engineering Specifications

30kHz Omni

The microphone shall be a back-electret condenser type with a wide-range uniform frequency response of 60 Hz to 30kHz -3dB. The microphone shall be of a single capsule, single membrane design with an impulse response rise time no longer than 25 microseconds, and total settling time, including rise time, no longer than 120 microseconds. The microphone shall have polar characteristics uniform in all planes to form an omni hemisphere of revolution and shall accept sound pressure levels up to 136dB producing no more than 3%THD. IMBL models shall have a LumiComm™ dual-color touch ring with colors of red and green, which are externally powered by 8-28 VDC @ 85-170mA via a Phoenix or RJ45 connector mounted on the microphone's external pc board. The touch ring will emit a momentary digital pulse from its external pc board connector to activate external systems or equipment. The microphone shall be resistant to RF interference from cell phones and other RF devices. The microphone body threading shall use the NPT standard of 1.660 in. (42.16mm) outer diameter 0.08696 in. (2.20878mm) thread pitch. The microphone shall be terminated with a male XLR-3 connector and shall require 24-48V phantom power. The microphone shall be made of metal with a choice of finish. The Earthworks IMBL30 light ring model, or IMB30 non-LED model (in black, white, silver or stainless) is specified.

- **High Definition Boundary Microphones™ for Conference Rooms and Fixed Sound Installations**
- **True Semisphere™ Polar Response (near-perfect frequency response at 0°, 45° & 90°)**
- **Very High Intelligibility**
- **LumiComm™ Programmable LED Touch Ring (with red and green LEDs)**
- **Non-Touch Ring Models Available in Black or White**
- **Can be Installed in Conference Tables (includes lock nut)**
- **60Hz to 30kHz Frequency Response**
- **RF Shielding against cell phones and other RF devices**
- **136dB Max Acoustic Input**
- **Requires 24-48V Phantom Power**
- **Available in Black, White or Silver**

Earthworks IMB & IMBL Series™ Boundary Layer Microphones

The IMB & IMBL boundary microphones provide a low profile, pristine sounding microphone solution for permanent sound installations. The extended high frequency response to 30kHz and True Semisphere™ polar response allow those speaking to maintain the same intelligibility at the front and sides of the microphone without a loss of high frequencies. In addition, the extremely fast diaphragm settling time allows more subtle details of the human voice to be reproduced, which adds to the amazing clarity and intelligibility of these microphones. A prominent feature of the IMBL microphones is the LumiComm™ LED Touch Ring (with dual color LEDs in red & green) that is touch sensitive and can be used to turn the microphone either on or off, or any other programmed function, simply by touching the light ring. The IMBL system interface board will allow the touch ring to be programmed by standard system interfaces or logic control systems. The IMBL system interface board is powered from an external power source of 8 to 28VDC @ 85-170 mA (current is dependent upon number of LEDs illuminated at one time). The IMB and IMBL Boundary High Definition Microphones™ will provide exceptional sound quality, with very high intelligibility at virtually all angles and distances.

IMB Series True Semisphere™ Polar Response

High Definition Boundary Microphones™ for Fixed Installations

The Earthworks IMB & IMBL Series™ High Definition Boundary Microphones™ are the perfect choice for high quality sound system installations. You will experience clarity and intelligibility as never before. The exceptional extended high frequency response, remarkably fast diaphragm settling time and near-perfect polar response all work together to provide the world's best boundary microphones. The IMB & IMBL Series™ provides you with the perfect low profile solution for conference tables, conference rooms and a wide variety of sound installations, while providing the ultimate in sound quality.

Near-Perfect Polar Response

David Blackmer, founder of dbx® and Earthworks® invented a number of new microphone technologies resulting in a totally new approach to microphone design. One such technology was the creation of near-perfect polar response. When you look at the polar response of an Earthworks microphone, the mid-frequencies, high-frequencies and low-frequencies all look very close to a "textbook" perfect polar pattern. In practice this means the polar response of an Earthworks microphone is extremely uniform over its operating frequency range; the frequency response at 90° and 180° off-axis is very close to the on-axis response. This uniform polar response results in less phase problems and much higher intelligibility at the sides of the microphone.

Installation

- Mounting hole: \varnothing 1 1/16" (27 mm)
- Install in a hard surface, such as a table, ceiling or wall.
- Vibration damper provides isolation from mounting surface.
- Do not overtighten washer, as this reduces shock isolation.

IMB SERIES SPECIFICATIONS

- Frequency Response:** 60Hz to 30kHz -3dB @ 1 ft. (30cm)
- Polar Pattern:** Omni Hemisphere
- Sensitivity:** 60mV/Pa
- Power requirements:** 24-48V Phantom, 10mA
- Max Acoustic Input:** 136dB SPL
- Output:** XLR-3 (pin 2+)
- Output Impedance:** 65 ohms balanced
- Min. Output Load:** 1K between pins 2 & 3
- Noise:** 19dB SPL (A weighted)
- Light Ring LED Colors:** Dual Red or Green
- Light Ring Connector:** Phoenix or RJ45
- Light Ring Voltage:** 8-28VDC @ 85-170mA
- Light Ring Activation:** Momentary Digital Pulse
- Microphone Color:** Black, White, Silver or Stainless Steel
- Dimensions:** See drawings on right side of page
- Weight:** 0.28 lbs. (125g)
